Datasheet for THFSMQ3

Technical Specification

tGard offers "a customised safety solution, as standard" and is defined by a range of tGard elements, including selector switches, safety switches(solenoid and non solenoid), personnel keys(safety keys), emergency release, push buttons, estops, indicator lamps and a choice of operating handles for both hinged and sliding guard doors. These elements are simply selected and then assembled into a robust housing, suitable for mounting onto machine guarding, providing the user with an exact configuration specific to the application.

tGard is quick and easy to install and can be mounted directly onto a flat surface, doors or extruded aluminium profiles without the need for mounting plates or brackets. It is IP65 as standard and has been designed to be fully compliant with the new machinery safety standards.
